

ABSTRACT

A control system includes a sound input unit 38 for receiving an input of a voice, an analyzing unit 41 for obtaining a characteristic of the sound by analyzing the
5 sound received by the sound input unit 38, a control information storage unit 35 for storing control information corresponding the characteristic of the sound, a retrieving unit 42 for retrieving, from within the control information storage unit, the control information
10 corresponding the characteristic of the sound, an output unit 34 for outputting a control result of operations based on predetermined functions such as displaying an image, reproducing a piece of music and giving a notice by vibrations, and a control unit 33 for controlling the
15 output unit based on the control information retrieved by the retrieving unit.
